

Disodium EDTA Chelation (CV) - IV Drip

What is Disodium EDTA Chelation IV?

EDTA Chelation therapy involves the intravenous infusion of vitamins, minerals, and the amino acid EDTA (ethylenediaminetetraacetic acid) into the bloodstream.

The EDTA molecule can bind to toxic heavy metals like lead, cadmium and aluminum to facilitate the removal of these unwanted substances. Excessive exposure to these metals increases oxidative stress in the body and damages the blood vessel walls. Additionally, EDTA binds excess calcium accumulations in the body (often found in blood vessels) to support cardiovascular health and promote circulation.

Ingredients

- Ascorbic Acid
- Sodium Bicarbonate
- Magnesium Chloride
- B-Complex 100
- B5-Dexpanthenol
- B6-Pyridoxine
- B12-Methylcobalamine
- Procaine
- Disodium EDTA
- Sterile Water

Procedure

A slow infusion is needed to allow the EDTA to bind accumulations of plaques, calcium, and or heavy metals that may be present in damaged vessels.

Duration

3-3.5 hours

Side Effects

Common

- Bruising at IV access site
- Decreased blood pressure
- Fatigue
- Headache
- Malaise

Rare

- Fever
- Nausea/vomiting
- Hypocalcemia
- Bone marrow depression
- Allergic reaction
- Kidney or liver complications
- Rash

Uses

- Atherosclerosis
- Heart disease
- Alzheimer's disease
- Arthritis
- Heavy metal burden

Aluminum

Symptoms

- Memory loss
- Heartburn
- Headaches
- Paralysis
- Weak muscles

Sources

- Foil
- Cookware
- Auto exhaust
- Food additives
- Antiperspirant

Arsenic

Symptoms

- Peripheral neuropathy (sensory changes)
- Hyperpigmentation
- Muscle tenderness
- Nephrosis
- Abdominal cramps

Sources

- Coal
- Paints
- Pesticides
- Fungicides
- Drinking water

Disodium EDTA Chelation (CV) - IV Drip

Cadmium

Symptoms

- Fatigue
- Neuropathy
- Arthritis
- Osteoporosis
- Migraines
- COPD
- Kidney disease
- Arterial stiffness

Sources

- Fertilizer
- Insecticides
- Shellfish
- Instant coffee
- Cigarette smoke

Lead

Symptoms

- Hypertension
- Hyperactivity
- Allergies
- Muscular weakness
- Osteoporosis
- Fatigue
- Impaired kidney function
- Impaired neurotransmitter synthesis

Sources

- Fuels
- Cigarette smoke
- Paint
- Lead pipes
- Cosmetics

Copper

Symptoms

- Hyperactivity
- Insomnia
- Hypertension
- Oily skin
- Pigmentation of skin
- Hair loss

Sources

- Copper cookware
- Fungicides
- Swimming pools
- foods

Nickel

Symptoms

- Dermatitis
- Low blood pressure
- Kidney dysfunction
- Intestinal cancer

Sources

- Cigarette smoke
- Peanut butter
- Oysters
- Stainless steel pots & pans

Mercury

Symptoms

- Neurological impairment
- Alzheimer's disease
- Kidney damage
- Fatigue
- Anxiety
- Depression
- Migraines

Sources

- Dental amalgams
- Certain seafood (tuna, swordfish, shark)

Tin

Symptoms

- Headaches
- Hyperglycemia
- Abdominal cramping
- Liver damage

Sources

- Tin cans
- Processed foods

Patient Prep

Please arrive on time and well-hydrated. Please ensure that you have eaten prior to the intravenous treatment.

Please inform a lab technician and/or your doctor if you have any allergies; have a history of any reaction to intravenous treatment or have any concerns regarding this treatment.

Please consult with your ND if your condition persists or worsens.

If you have any questions, please contact us at (604) 738-1012, ext.1

Notes
