

Stress Buster - IV Drip

What is Stress Buster IV?

Stress is often unavoidable in today's fast-paced society. It can play havoc on the human body. This IV is specifically formulated to enhance our ability to cope with the effects of acute and chronic mental and physical stress by providing adequate nutrients that support our hypothalamic-pituitary-adrenal axis.

Periods of prolonged or high acute stress led to dysfunctional cortisol and adrenaline secretion patterns. This can manifest in such symptoms as anxiety, muscle aches, headaches, exhaustion, sleep disturbances, increased water retention, sugar or salt cravings, menstrual irregularities, delayed wound healing, increased susceptibility to infection, and blood sugar imbalances. IV nutrient administration is an excellent means to replenish the increased nutrient demands required in periods of high stress and help to mitigate the metabolic effects stress has on the body.

Vitamin C is one of the most important vitamins utilized by our adrenal glands. It is crucial for the production of adrenal hormones and helps to heal cellular oxidative damage caused by excess stress. The role of vitamin C in the synthesis of collagen, carnitine, neurotransmitters and neuropeptides is essential for wound healing, energy metabolism and nervous system function.

B-vitamins is key players in our energy pathways. They are responsible for cell health, healthy brain function, proper digestion, nerve function, cardiovascular health, and support a positive mood.

Tryptophan, glycine, and taurine are important amino acids with many functions, particularly in that they support the parasympathetic nervous system (our state of rest and digest), sleep, and mood.

B12 and Leucovorin, or folic acid, is necessary for proper methylation in hormone and neurotransmitter synthesis. Zinc is critical cofactor of over 3000 enzymatic proteins in the body.

This IV also contains major and trace minerals, both necessary in a number of metabolic pathways such as muscle contraction, nerve conduction, protein synthesis, immune function, connective tissue health, fluid regulation, and correct acid-base balance within the body.

Mineral deficiency has become increasingly more common with poor diet, malabsorption conditions, and modern day agriculture depleting our soil of many minerals. Periods of enhanced or prolonged stress require increased amounts of these vitamins and minerals to restore homeostasis and repair within the body.

Uses

- Improve energy levels, adrenal health, and increase resiliency to mental & physical stress
- Aid in sleep regulation
- Balance nervous system dysfunction
- Promote healthy mood

Ingredients

- Ascorbic Acid
- Magnesium Chloride
- Calcium Chloride
- Leucovorin/FA
- Dexpanthenol (B5)
- Pyridoxine (B6)
- B-Complex
- Methylcobalamine (B12)
- Glycine
- L-Taurine
- Zinc Sulfate
- Tryptophan
- Sodium Bicarbonate
- Procaine 2%
- Sterile Water
