

# Metabolic B-Vitamin - Injection

## What is Metabolic B-Vitamin Complex?

A highly effective injectable vitamin formula, Metabolic B-Vitamin Complex contains high grade, high potency bio-available vitamin B compounds. Originally discovered in 1988 by Vancouver Metabolic Specialist Frank Ludde, Metabolic B-Vitamin Complex has applications for:

- Prevention and treatment of disease (i.e. arthritis, chronic fatigue, fibromyalgia, MS, inflammatory bowel disease, Alzheimers, auto-immune disorders and more)
- Enhancement of health and vitality
- Anti-aging
- Improved endurance and athletic performance
- Increased feelings of mental/emotional well-being (beneficial for depression, bipolar disorder, emotional, neurological and neurochemical imbalance)

## How does it work?

Metabolic Vitamin Therapy is based on the philosophy that the body heals and repairs itself provided it is given all the vital nutrients it needs and it is enabled to absorb, assimilate and synthesize these nutrients. To enable adequate use of these nutrients the body needs to receive proper command signals from the brain.

The body's command centres in the brain include the thalamus, hypothalamus and pituitary glands. Directly involved in communication between the brain and the body, these glands interpret and control numerous body systems and functions.

Factors such as stress, diet, prescription drugs and environmental toxicity can affect these command centres leading to deficiency or imbalance. If the command centres are deficient the body cannot function properly. Metabolism breaks down at the cellular level and disease sets in.

## Notes

---

---

---

---

---

---

---

---

Metabolic B-Vitamin Complex restores balance and strength to these glands, enabling the body's command centres to communicate with the body systems involved in absorption, assimilation and synthesis.

When the body is functioning effectively the immune system is able to do the work of healing, repairing and regenerating. Increased health and vitality are a direct result.

The injections are delivered intramuscularly and your doctor determines dose and frequency.
